

00_DataBase_Fixes

Overview

During SQL analysis, several date-related columns were identified as being stored as TEXT instead of TIMESTAMP after PostgreSQL data loading.

These datatype issues prevented accurate date calculations, trend analysis, delivery analysis, and review response time calculations.

The columns were corrected using ALTER TABLE statements before proceeding with advanced SQL analysis.

Orders Table Datatype Fixes

The following columns in the orders table were converted from TEXT to TIMESTAMP:

- order_purchase_timestamp
- order_approved_at
- order_delivered_carrier_date
- order_delivered_customer_date
- order_estimated_delivery_date

Business Impact

These corrections enabled:

- Monthly and yearly sales trend analysis
- Delivery performance analysis
- Approval time calculations
- Fulfillment time calculations
- Delivery delay calculations

Reviews Table Datatype Fixes

The following columns in the reviews table were converted from TEXT to TIMESTAMP:

- review_creation_date
- review_answer_timestamp

Business Impact

These corrections enabled:

- Review response time analysis
- Customer engagement analysis
- Review lifecycle tracking
- Review timing KPI calculations

Order Items Table Datatype Fix

The following column in the order_items table was converted from TEXT to TIMESTAMP:

- shipping_limit_date

Business Impact

This correction enabled:

- Shipping deadline analysis
- Logistics performance monitoring
- Shipping lead time calculations
- Time-based operational reporting

Total Columns Corrected

Orders Table: 5 columns

Reviews Table: 2 columns

Order Items Table: 1 column

Total Datatype Corrections: 8 columns

Validation

After conversion, all 8 corrected columns were verified using PostgreSQL information_schema and successfully changed to TIMESTAMP datatype.
