

04_Business_Analysis

Purpose

The objective of this analysis is to evaluate marketplace performance, identify key revenue drivers, understand customer purchasing behavior, assess operational effectiveness, and measure customer satisfaction. Insights generated from this analysis will support data-driven decision-making and help identify areas for future growth and improvement.

Revenue Analysis

Key Findings

The marketplace generated total revenue of 16,008,872.12 during the analysis period.

Revenue is highly concentrated geographically, with the top 10 customer states contributing 87.38% of total revenue. São Paulo (SP) emerged as the largest revenue-generating state, followed by Rio de Janeiro (RJ) and Minas Gerais (MG).

Category-level analysis showed that Bed, Bath & Table, Beauty & Health, Computer Accessories, Furniture & Decoration, and Watches & Gifts were the highest revenue-generating product categories.

Analysis

The revenue distribution indicates a strong dependence on a limited number of geographic markets and product categories. States with larger populations and stronger economic activity contribute significantly more revenue than other regions.

Similarly, a relatively small group of product categories accounts for a substantial share of marketplace sales, demonstrating that customer demand is concentrated in specific product segments.

Business Impact

Revenue concentration creates both opportunities and risks. High-performing states and categories represent valuable growth drivers, while heavy dependence on a limited number of markets may increase vulnerability to changes in customer demand or competitive pressure.

Customer Analysis

Key Findings

The marketplace served 96,096 unique customers and processed 99,441 orders.

Average Order Value (AOV) was 160.99, while Revenue Per Customer was 166.59.

Orders Per Customer was 1.03, and the Repeat Purchase Rate was 3.12%.

Analysis

Customer acquisition performance appears strong based on the size of the customer base and total order volume. However, repeat purchasing behavior is relatively low. Most customers place a single order and do not return for additional purchases during the observed period.

The small difference between Orders Per Customer and one indicates limited repeat engagement.

Business Impact

Customer retention represents one of the largest growth opportunities for the marketplace. Improving repeat purchase behavior could significantly increase revenue without requiring proportional increases in customer acquisition spending.

Product Analysis

Key Findings

Bed, Bath & Table was the leading category in terms of revenue generation, order volume, and catalog presence.

Beauty & Health and Computer Accessories were also among the strongest performing categories.

PCs generated the highest average revenue per order, indicating a premium product segment with high transaction value.

The top 10 product categories accounted for 62.96% of the product catalog.

Analysis

Product performance is concentrated in home, lifestyle, and technology-related categories. Certain categories drive revenue through large order volumes, while others contribute through high-value transactions.

The marketplace benefits from both volume-driven and premium product segments.

Business Impact

Maintaining strong category performance while expanding promising product segments can support future revenue growth. Premium categories offer opportunities to increase transaction value, while high-volume categories support consistent sales activity.

Operational Analysis

Key Findings

The Delivery Success Rate was 97.02%.

The majority of orders reached customers successfully, indicating stable fulfillment operations.

Order processing and delivery performance remained consistent across the marketplace.

Analysis

Operational performance is one of the marketplace's strongest areas. High delivery completion rates suggest effective logistics coordination and order fulfillment processes.

Reliable delivery performance contributes positively to both customer satisfaction and marketplace reputation.

Business Impact

Strong operational execution provides a foundation for sustainable growth. Maintaining delivery performance while scaling transaction volume will be critical for long-term success.

Customer Satisfaction Analysis

Key Findings

The Average Review Score was 4.09 out of 5.

The Five-Star Review Rate was 57.78%.

Books, food-related products, and pet-related products received some of the highest customer ratings.

Furniture, home products, and certain technology-related categories received comparatively lower ratings.

Analysis

Overall customer sentiment is positive, with most customers expressing satisfaction through high ratings. However, category-level analysis reveals performance differences across product segments.

Several categories that generate significant revenue also receive relatively lower customer ratings, suggesting opportunities for service improvement.

Business Impact

Improving customer satisfaction within high-revenue categories could increase customer retention, strengthen marketplace reputation, and support long-term revenue growth.

Overall Business Assessment

The marketplace demonstrates strong revenue generation, high delivery success rates, and positive customer satisfaction. Revenue performance is supported by a concentrated group of geographic markets and product categories.

The most significant opportunity identified during the analysis is customer retention. While customer acquisition performance is strong, repeat purchasing behavior remains limited. Increasing customer loyalty and encouraging repeat purchases could produce substantial business value.

Operational performance and customer satisfaction provide a strong foundation for future growth. Continued focus on customer experience, category expansion, and retention strategies can help strengthen long-term marketplace performance.
