

01_customers

Table Purpose

This table contains customer-related information and identifies unique customers within the e-commerce platform.

What One Row Represents

One row represents one unique customer record in the system.

Possible Primary Key

customer_id

Possible Foreign Keys

This is likely a parent/master table but customer_id will probably will appear as foreign key in orders table.

Columns Overview

Column	Business Meaning
customer_id	Unique identifier for each customer
customer_unique_id	Identifier representing the actual unique customer across multiple orders
customer_zip_code_prefix	Customer ZIP code region
customer_city	Customer city
customer_state	Customer state/location

Initial Observations

The table contains geographic information that may help analyze regional purchasing behavior and customer distribution. The presence of customer_unique_id suggests that a single customer may appear multiple times across different transactions.
