

06_reviews

Table Purpose

This table contains customer review and satisfaction-related information associated with completed orders. It helps understand customer experience, feedback patterns, and review behavior.

What One Row Represents

One row represents one customer review associated with an order.

Possible Primary Key

Review_id

alternative consideration: (order_id + review_id)

Possible Foreign Keys

Column	Connected Table
order_id	orders

Columns Overview

Column	Business Meaning
review_id	Unique identifier for the review
order_id	Order associated with the review
review_score	Customer satisfaction/review rating
review_comment_title	Title/summary of customer review
review_comment_message	Detailed customer feedback
review_creation_date	Date when review was created
review_answer_timestamp	Date/time when review response was recorded

Initial Observations

- This table captures customer satisfaction and feedback-related information.

- Review scores may strongly influence customer retention and overall business reputation.
- Review timestamps may help analyze customer engagement and support responsiveness.
- Customer reviews can support customer experience and churn-related analysis.
- Review-related insights may help identify operational or delivery-related issues affecting satisfaction.
