

07_sellers

Table Purpose

This table contains seller-related information, including seller location details such as city, state, and ZIP code.

What One Row Represents

One row represents one seller operating on the e-commerce platform.

Possible Primary Key

seller_id

Reason: Each seller appears to have a unique identifier.

Possible Foreign Keys

No direct foreign keys identified in this table.

seller_id likely acts as a foreign key in:
order_items table

Columns Overview

Column	Business Meaning
seller_id	Unique identifier for each seller
seller_zip_code_prefix	Seller ZIP code region
seller_city	Seller city
seller_state	Seller state/location

Initial Observations

- This table mainly contains descriptive seller information and geographic details.
- Seller location data may help analyze regional seller distribution and operational coverage.

- The table becomes more valuable when combined with orders, reviews, and delivery-related tables.
- Seller-related analysis may help identify high-performing or problematic sellers based on delivery performance and customer reviews.
- Delivery delays or negative customer experiences may potentially be linked to specific seller operations.
