

08_geolocation

Table Purpose

This table contains geographic location-related information, including ZIP code regions, cities, states, latitude, and longitude data.

What One Row Represents

One row represents geographic location information associated with a ZIP code region.

Possible Primary Key

No clear primary key identified.

Possible Foreign Keys

Potential relationship with:

- customer ZIP code
- seller ZIP code

through ZIP code prefix columns.

Columns Overview

Column	Business Meaning
geolocation_zip_code_prefix	ZIP code region identifier
geolocation_lat	Geographic latitude coordinate
geolocation_lng	Geographic longitude coordinate
geolocation_city	City name
geolocation_state	State/location

Initial Observations

- The table helps support geographic and regional analysis.
- Geographic data may help identify high-performing customer or seller regions.

- Location-based analysis may support delivery performance and operational efficiency studies.
- Latitude and longitude information may support logistics, mapping, and route-related analysis.
- Geographic insights may help businesses improve regional targeting and customer reach strategies.
